

ARTIFICIAL INSEMINATION OF SWINE

Artificial Insemination (A.I.) in Swine is the process of depositing semen of genetic superior boar in the female genitalia by the use of catheter.

The benefits of Artificial Insemination in Swine are the following:

1. Minimizes the spread of reproductive diseases.
2. Avoids possible injuries on either the boar or the sow/gilt that may happen during mating.
3. Allows breeding of females from distant places with less transport costs & inconvenience, and without causing stress on the boar.
4. Eliminates the problem of mating boars and sows of different sizes.
5. Increases the number of sows bred by a boar.
6. Reduces breeding cost

The Provincial Veterinary Office is operating two Artificial Insemination Centers located at Cabagan Breeding Station, Cabagan, Isabela and at Cauayan City Veterinary Office, Cabaruan, Cauayan City, Isabela.

Soon, another A.I. Center will be opened in Malibago, Echague, Isabela to serve swine raisers in the 4th District of the province.
